Version:	v1.11
Updated by:	John Cloys
Supersedes:	V1.10
Figma Version:	V1.11
Updates:	N/A

Context

This document outlines the CivicTheme design components assessments based on compliance to the Web Content Accessibility Guidelines (WCAG) 2.2.

CivicTheme is designed and built based on the (former) Australian Government Design System (AGDS), that was initially created by the Digital Transformation Agency (DTA) for use by Australian Government websites.

Used by government websites the AGDS was also adopted temporarily by the GovCMS program which shipped the AGDS with GovCMS Drupal 7 projects.

The AGDS was officially decommissioned in September 2021, however provides a substantial best practice foundational design system and a ‘common language’ for government website design.

CivicTheme builds upon the AGDS ethos and uplifts components and processes while making the design system open source as well. With updated technology and methods to deliver the same rigorous approach to user centred design, accessibility, and design best practices, components from the original AGDS have been rebuilt for government websites to use again.

CivicTheme is a government-grade design system that has been reviewed for WCAG 2.2 AA compliance. Although we know we can still make improvements, we've gone through a rigorous process to build and test the components with an accessibility-first mindset.

We used the following process:

- Tested using our Salsa accessibility starter kit
- Performed automated testing using ANDI, aXe and Accessibility Insights
- Performed manual testing using keyboard, mouse and VoiceOver

We're continually monitoring all of the components for accessibility. If you have any feedback or questions on our accessibility process or if you've found any issues with CivicTheme components that make it difficult for everyone to be able to access information, please contact us at civictheme@salsadigital.com.au.

CivicTheme is an open source project maintained by Salsa Digital.
